Chip Installation

BE AWARE: All power to the vehicle must be **DISCONNECTED** prior to installation. Failure to do so could result in damage to your vehicles ECM.

Gain Access to ECM

Disconnect both batteries and locate the three nuts holding on the parking brake pedal assembly. Make sure the parking brake is released and with a socket wrench and 13mm socket remove the three nuts. From there you should be able to move the pedal assembly out of the way to gain access to the ECM.

Stock ECM Connector Preparation

Remove the black plug/cap if it is still installed on the ECM. Once you have access to the J3 port, carefully clean the contact pad with the provided piece of scotch brite. Make sure to wipe off any residue with some rubbing alcohol or lacquer thinner on a paper towel.

Please verify that BOTH sides of the edge connector were cleaned thoroughly. Improper cleaning is the most common reason for chip failure or incorrect operation.

Installing the Switch/Chip

Slide the connector cable into the chip.

The proper orientation of the chip is with the circuit board of the chip and the switch cable on the larger side of the J3 port opening.

Once you have properly mounted the chip, secure the chip to the ECM with a piece of package sealing or duct tape.

Clean Up

Once the chip is securely installed onto the ECM, reinstall the parking brake pedal assembly. Run the switch out of the top of the assembly without pinching the wire.

Reconnect Batteries

Install Switch in a convenient location.
