Paccar Engine Installation Instructions

1) Locate the ECM Harness on the driver's side of the engine. Unplug the ECM Harness by rotating the locking lever to release. Remove the harness from the ECM

Note: The plug located at the top of the ECM is the correct one to disconnect.

- 2) Plug the male connector from the module harness into the ECM.

- 3) Plug the factory male harness into the female connector. Squeeze the connector together and then press the locking lever to latch the connector together.

- 4) Route the power and ground wires to the alternator. The red wire should connect to a +12 volt constant source. The black wire should connect to a good, clean ground.

- 5) Plug the Harness into the module. Mount the module with supplied zip ties away from any excessive heat or moving parts. Note: Zip tie the module to the factory wire harness. Mounting the module with the connector down will help prevent moisture from collecting into the module connector
