1) Remove the plastic panel from the compartment on the left side of the tractor in front of the steps to gain access to the ECM.

2) Unplug the stock #8 ECM connector by rotating the locking lever on top of the connector towards the right. **Note: The #8 ECM plug is located on the top left as you face the ECM. You will need to remove the other three plugs to its right to gain access.**

3) Plug the male connector from the Ag Diesel Solutions module into the ECM. **Note: The locking lever on the module will slide in to lock the connector in place. The orientation is the same as the stock connector.**

4) Plug the stock male connector located on the engine harness into the female connector on the module harness. Gently push the connectors together while you rotate the locking lever to latch the connectors together.

5) Mount the red power wire to the intake air heater grid relay, +12 volt constant source and the ground wire to one of the AC compressor mounting bolts.

6) Plug the harness into the module and mount with the module connector facing down to prevent moisture buildup. Mounting location should be away from excessive heat and moving components. Note: If possible zip tie the module to the factory wire harness.
