Step 1) Locate the ECM on the side of the engine.

Step 2) Disconnect the stock ECM harness by pushing the locking lever down to release. Remove the harness from the ECM.

Step 3) Connect the male connector from the Ag Diesel Solution module harness into the ECM.

Step 4) Connect the Ag Diesel Solutions female harness into the stock female plug located on the engine harness. Squeeze the connector together and then press the locking lever to latch the connector together.

Step 5) Route the power and ground wires to the alternator. The red wire should connect to a +12 volt constant source. The black wire should connect to a good ground.

Step 6) Plug the Harness into the module. Mount the module with supplied zip ties away from any excessive heat or moving parts.

Note: Zip tie the module to the factory wire harness. Mounting the module with the connector down will help prevent moisture from collecting into the module connector
