2.2L Iveco/ FPT Engine Instructions

- 1) From the tractor cab looking forward, locate the fuel system on the left side of the engine. You will see the common rail with the injector lines coming out of it.

- 2) Locate fuel pressure sensor sticking out of the end of the common rail towards the firewall.

- 3)** Press down on tab to unplug fuel pressure sensor. If the plug seems stuck pushing the connector into the rail while holding the release tab can sometimes help it unlatch.

- 4)** Plug female fuel pressure connector from module into fuel pressure sensor. Make sure the connector plugs in smoothly and you hear an audible 'click'.

- 5) Connect the stock female connector to the male fuel pressure connector from the module harness. Make sure the connectors go together smoothly and you hear an audible 'click'.

- 6) Mount module in a secure location away from any extreme heat or moving parts. Secure the module and any excess harness with supplied zip ties.
